

## **SLIDABLE FASTENER BEARING ASSEMBLY**

### **ABSTRACT**

A bearing assembly is disclosed, which comprises at least two slidable fasteners  
5 interengaged with at least two bearing pieces such that the slidable fasteners have  
substantially unrestricted biaxial motion relative to one another. The bearing pieces are  
comprised of self-closable fastener film comprising a base sheet and a multiplicity of  
ribs projecting from the base sheet, wherein the flat side of the first bearing piece is  
attached to the flat side of the second bearing piece such that the ribs of the first bearing  
10 piece are not parallel relative to the ribs of the second bearing piece.
